What’s in this handbook.

01	What EduRank is	The idea, the goal, the current status
02	How it works	A student's journey, step by step
03	The points economy	How PTS are earned and spent
04	Notes & moderation	Uploads, review, official content
05	People & roles	Students, teachers, principals, owner
06	Getting found on Google	The free public notes library
07	What it’s built with	The technology, in plain terms
08	Security & the law	Protections and POPIA
09	Your access & how to run it	Accounts, commands, deployment
10	Costs, next steps & support	What it costs and where it goes next

READ THIS FIRST

EduRank is **live** and ready for its first users. The front door is edurank.co.za. You have an **owner account** that sees everything. When you log in, you land on your own control room — not the student view.

A school ecosystem for sharing notes and climbing the ranks.

EduRank lets South African high-school students (Grades 8–12) upload the notes that helped them, earn points for sharing, and spend those points to unlock other students' work — wrapped in a leaderboard, a school map, and a free library of official notes.

OFFICIAL NOTES LIVE

The problem it solves

Notes and past-paper-style study material already get traded between students on WhatsApp and at break time — informally, unfairly, and with no reward for the person who made it. EduRank gives that exchange a proper home: one place to share, earn, and be recognised.

Current status

- **Live** at edurank.co.za, served from Cloudflare's global network.
- **Fresh start:** accounts were cleared, so the site invites its first real users ("Be the first").
- **25 official notes** already published for Grades 11–12 in Mathematics, Physical Sciences, Life Sciences and Accounting.
- You (the owner) are the only account with full visibility.

The student's journey, step by step.

- 01 **Sign up.** Name, email, password — with a quick “I’m human” check (Turnstile) and an email confirmation link.
- 02 **Pick a grade.** This locks for the school year, so a Grade 11 student only ever sees Grade 11 material.
- 03 **Pick a school on the map.** Tap the school on the map of South Africa; it locks once chosen and shows on the leaderboards.
- 04 **Browse & read.** Free notes open in the browser; premium community notes cost PTS. Every download is tracked.
- 05 **Upload notes.** A note is fingerprinted, reviewed by an AI moderator, and paid out (+50 PTS) when approved.
- 06 **Earn PTS** from uploads, downloads, upvotes, referrals, streaks and daily challenges.
- 07 **Spend PTS** to unlock other students’ premium notes (the uploader keeps 50%) or buy cosmetics in the shop.
- 08 **Climb.** Weekly and all-time leaderboards for the country, each subject, and each school.

THE LOOP

Upload → get approved → earn PTS → unlock better notes → upload more.

PTS: earned, spent, and always on the ledger.

Every point traces back to a real record in the database — nothing on screen is invented.

ACTION	PTS
Note approved	+50
Someone downloads your note	+10
Someone upvotes your note	+5
Daily login streak	+5 base, +2/day (cap +15)
Referral (both sides)	+100
Complete your profile	+30
Daily challenge cleared	+25 each
Unlock someone's paid note	-price (uploader keeps 50%)
Cosmetic purchase	-price

Daily challenges & streaks

Three challenges rotate each day (study, upload, upvote, show up). Login streaks pay more each consecutive day.

Leaderboards & badges

Boards for global / subject / school, weekly and all-time. Achievements unlock automatically and never cost points.

Quality on the way in, protection on the way out.

Every upload is reviewed

Uploads are scanned by an AI moderator (plus a hard rule set) for spam, junk, and exam-paper/leaked material. Approvals pay out; rejections tell the uploader why. Nothing risky is auto-approved.

Provenance & copyright

Each file gets a **SHA-256 fingerprint** at upload, and exact duplicates are rejected. Uploaders keep their copyright and can share a public **provenance certificate** as proof they made it first. A “Report stolen” button opens a takedown review.

Official notes (written by the EduRank team)

Hermes produces original, CAPS-aligned notes with a PDF; they’re published through a script and marked **OFFICIAL**. They’re **free and public**, which is what lets Google index them.

GRADE + SUBJECT HUBS

PDF

DOWNLOAD PER GUIDE

Four kinds of people, plus you.

ROLE	WHAT THEY CAN DO
Student	Browse and unlock notes for their grade, upload, earn PTS, climb boards.
Teacher	Beyond student access: free viewing of notes in their assigned subjects at their school, and they can mark notes VERIFIED . Joined by invitation from a principal.
Principal	A dashboard for their school: students, stats, the school's notes, promotions (who repeats a year), and teacher invites. Joined by invitation from the owner.
Owner (you)	Sees everything: people, content, economy, activity. Super-admin over every panel.

Staff are invited, never self-declared

Roles can't be chosen at signup — that stops anyone claiming to be a teacher. The owner creates a **principal invite** for a school; that principal creates **teacher invites** (scoped to subjects). Each invite is a single-use link that expires in 30 days.

INVITE FLOW Owner → principal link → principal → teacher links → teachers.

A free library that Google can read.

Most of the app sits behind a login, which search engines can't see. The official notes are different: they have public, server-rendered pages built specifically to be found.

What was set up

- **Public pages** at /study, /study/<grade>/<subject> and each note.
- **Real text in the HTML** (not hidden behind scripts) so crawlers can read the notes.
- **Structured data** (schema.org *LearningResource* + breadcrumbs) for rich results.
- **Sitemap** listing every page, and a **robots.txt** that invites Google into /study.
- Per-page titles, descriptions and a social share image.

NEXT FOR SEO

Verify the site in **Google Search Console** and submit the sitemap so the notes get indexed. That's the one step that still needs you.

Modern, cheap, and fast.

LAYER	TECHNOLOGY
Website	Next.js 14 (React) — hosted on Cloudflare Pages
Backend / API	Cloudflare Worker (Hono) — the “brain” behind everything
Database	Cloudflare D1 (SQLite) via Drizzle
File storage	Cloudflare R2 (note PDFs, covers, avatars, cached images)
AI moderation	Cloudflare Workers AI
Email	Resend (verification, resets, daily digest)
Bot protection	Cloudflare Turnstile
Maps	MapLibre + OpenFreeMap (free, no API key)

Everything runs on Cloudflare's edge network — fast for South African users and cheap to run.

Looked after, and POPIA-aware.

Security measures in place

- Passwords are stored as salted hashes; sessions use unguessable tokens.
- Private data is scoped — students can't see other students' data or other grades.
- Rate limiting and **Turnstile** block brute-force and bot signups.
- **Email verification** is required before earning or spending.
- Security headers (HTTPS/HSTS, frame protection) are set across the site.
- The API has been tested against common attacks (injection, unauthorised access, traversal).

POPIA & legal (South Africa)

- Privacy Policy with an **Information Officer**, lawful basis, retention, and data-subject rights.
- Terms of Service, Cookie policy, Community Guidelines, Copyright/takedown and Accessibility pages.
- Data is processed on Cloudflare; cross-border handling is disclosed.

These policies are a strong, honest starting point but should be reviewed by a South African attorney before you rely on them commercially.

You're the owner. Here's the keys.

ITEM	WHERE
Your owner account	<code>jacquesdup90@gmail.com</code> — logs into <code>/owner</code>
Live site	<code>edurank.co.za</code>
Admin panel	<code>edurank.co.za/admin</code>
Code	<code>github.com/wyrmic-arch/edurankv1</code>
Domain / hosting	Cloudflare account (<code>Jacquesd264160@gmail.com</code>)
Email sending	Resend (<code>jacquesd264160@gmail.com</code>)
Support inbox	<code>jacquesdup90@gmail.com</code>

Day-to-day

- **Invite a principal:** `/admin` → Staff & promotions → create invite → copy the link.
- **Publish new official notes:** drop Markdown + PDF in `content/official/`, run `npm run publish:official`.
- **Deploy changes:** rebuild and push (I handle this on request).

What it costs and where it goes.

Running costs today

ITEM	COST
Cloudflare (Pages, Workers, D1, R2, Turnstile)	Free tier
Resend email	Free tier (3,000/mo)
Map + imagery	Free
Domain (edurank.co.za)	~R100 / year

Effectively free until the platform gets real traction.

Ideas queued for next

- Reward students with **airtime / data vouchers** (cash-outs without a bank account).
- **Ratings & reviews** from verified buyers.
- **Google Search Console** setup so the free notes get indexed.
- A tutor marketplace, using the teacher accounts that already exist.

Questions, changes, or something breaks? Email jacquesdup90@gmail.com — site problems also email you automatically.
